

Serial No. 10/717,254

IN THE CLAIMS

1-19. (canceled)

20. (new) A carton for enclosing a group of cylindrical articles arranged in a plurality of columns and at least one row, comprising:

 a plurality of walls hingedly connected to one another; and
 at least one detachable portion detachably connected to at least a first and a second adjacent wall, said at least one detachable portion to be detached from said carton to define an opening for exposing at least a portion of at least one article in a column that is adjacent to an endmost column of said article group.

21. (new) The carton of Claim 20, further comprising:

 at least one partially detachable portion for restraining articles in said carton after said at least one detachable portion has been detached from said carton;
 wherein said at least one fully detachable portion and said at least one partially detachable portion border one another.

22. (new) The carton of Claim 20, wherein said article in said column that is adjacent to said endmost column is in the uppermost row of the group of articles.

23. (new) The carton of Claim 20, wherein said article in said column that is adjacent to said endmost column is in the lowermost row of the group of articles.

Serial No. 10/717,254

24. (new) The carton of Claim 20, wherein said article in said column that is adjacent to said endmost column is in a row that is between the uppermost and lowermost rows of the group of articles.

25. (new) The carton of Claim 20, wherein said detachable portion is defined by a frangible line.

26. (new) The carton of Claim 21, wherein said partially detachable portion is defined at least in part by a frangible line.

27. (new) The carton of Claim 26, wherein said partially detachable portion is defined in part by a fold line.

28. (new) The carton of Claim 20, wherein said opening exposes at least a portion of an end of said at least one article in a column that is adjacent to an endmost column of said article group.

29. (new) The carton of Claim 28, wherein said portion of said end is sufficient to enable removal of said at least one article in a column that is adjacent to an endmost column of said article group.
